

## **Abstract**

### **Title:**

Analysis of Offence after Active Defence

### **Objectives:**

The primary objective of this thesis is to implement quantitative and qualitative analysis of offence after reaching the ball during active defence within Bayern Munich matches. Attacks finished with a shot or a final pass. Consequently, the aims in view will be evaluated.

### **Methods:**

The work uses the indirect observation method in particular matches which were available due to video records. Successful attacks were analysed according to quantity and quality. This analysis is focused on a detailed study of each attack from its founding thanks to gaining the ball during active defence to its ending.

### **Results:**

The results show the types and models realized during the monitored attacks of Bayern Munich team within the UEFA Champions League 2012/2013. Further, offensive and defensive phases of the game in the modern aspect of football are clarified. Last but not least, we are able to apply the models in question to different achievement groups.
